WRD-ACT4 / SPINDLE CLUTCH ACCESSORY

Automated Clutch Tool – 1/4 in

Controlled slip in place of a locked U Bit for Orange Bat setups.

Fits directly into 1/4 in hex Orange Bat spindle setups, replacing the locked U Bit with adjustable slip for cleaner tension release, less forced cutting, and better line life.

1/4 in hex	Orange Bat	Adjustable slip disk
DRIVE	BEST FIT	CONTROL

Replaces locked U Bit behavior

Swaps a fixed lock for adjustable slip so the spindle can release tension instead of staying solid under load.

Adjusts as load changes

Helps manage changing line pull through corners, dense urethane, and shifting cut resistance.

Direct ACT4 fit

Built for 1/4 in Orange Bat spindle setups so size selection is simple and specific.

Protects line life

Controlled slip can reduce over-tension and help the line last longer through the cut.

KEY SPECS

Drive fit	1/4 in hex
Primary use	Orange Bat powered-drive setups
Tool type	Automated clutch / drag tool
Tension control	Adjustable slip disk
Function	Automated line tension control

COMPATIBLE WRD SYSTEMS

- **Orange Bat removal systems**
- **Orange Bat QC systems**
- **1/4 in hex powered-drive setups**

FIELD USE NOTES

- **Start light on clutch setting**; increase only as needed.
- **Use it to control release**; do not treat the clutch as a substitute for correct line path and tool setup.
- **Match the 1/4 in version correctly**; ACT4 is the Orange Bat size, not the 5/16 in Bison setup.
- **Watch line heat and glazing**; back off tension if the line begins to drag hard or run hot.

SYSTEM ROLE

The ACT4 mounts directly on the spindle in place of a U Bit, adding adjustable slip where the system would otherwise lock solid.

Orange Bat spindle → **ACT4 clutch tool** → **Controlled tension release**

Unlike a U Bit that locks the setup, the ACT4 allows controlled release and adjustment as line load changes through the cut.
