

WRD-LTK / EXTENDED REACH QUARTER PANEL URETHANE CUTTING KNIFE

WRD Long Tap Knife

Extended-reach manual cutout knife for deep quarter panels and recessed glass

Derived from the classic WRD-TK, the WRD Long Tap Knife features an extended shank to access deep-set urethane tracks. The handleless design fits directly into WRD Quick-Slot™ handles, offering maximum versatility and extra reach. It is the ideal solution for deep quarter-panel channels and other tight-access areas where extra length is necessary to clear body panels.

REACH PROFILE

Extended reach profile

Features an elongated blade shank that reaches deep into recessed pinchwelds and complex glass channels.

Quick-Slot interchangeable shank

Works seamlessly with the WRD Quick-Slot™ handle mechanism, allowing fast transitions between standard and long blades.

Handleless design

Ships without a handle as an interchangeable attachment to minimize tool bag weight and cost.

High-grade tempered steel

Tempered for structural durability to resist flexing and metal fatigue under high pull loads.

KEY SPECS

Blade structure	Tempered tool steel
Compatible handles	WRD Rhino Knife handle and Quick-Slot accessories
Cut profile	Extended T-shape tap blade
Total length	Extended reach
Target applications	Deep-set quarter panels, recessed rear glass, commercial cabins

COMPATIBLE WRD SYSTEMS

- Rhino Knife Handle (WRD-RK)
- Rhino Knife Set (WRD-RKS)

FIELD USE NOTES

- **Leverage caution;** Due to the longer shank, do not pry or apply lateral twisting force, as this increases the risk of bending the blade.
- **Alignment;** Verify that the long shank is aligned with the urethane track before applying pull force to ensure clean cutting.
- **Mallet tapping;** When tapping with a mallet, ensure the force is applied directly along the axis of the shank to prevent deformation.
