|----------------------------------------------------------|----------------------------------------|-----------------------------------------------------|

AVAILABLE IN

Black Edition configuration

Includes black edition components where the kit calls for edition-specific parts.

Current-generation Spider

Refined Spider 4M body with faster setup and improved field ergonomics.

Angle driver included

300P includes WRD Angle Driver 2.0 for powered low-clearance spindle drive.

Damage-conscious removal

Uses synthetic cutting line instead of steel wire or exposed blades.

WHAT CHANGED IN 4M

Male hex spindle
Faster bit engagement and a more secure drive connection.

Door striker notch
Anchoring option for quarter-glass removals and tight body openings.

Reinforced spindle
Built for higher-tension pulls and repeated shop use.

Improved pump access
More clearance around the pump for faster vacuum setup.

SYSTEM SPECS

| | |
|-------------------------|---------------------------------------------------------------|
| Core design | Low-profile single-spindle removal system |
| Drive method | Cordless drill via Angle Driver 2.0 |
| Recommended drill speed | 0-500 RPM |

SYSTEM ROLE

| | |
|------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Black Edition kit Uses black components where contents are edition-specific.</p> | <p>On-tool frame anchor A built-in secondary anchor point on the Spider chassis provides an integrated routing option alongside the separate anchor cup.</p> |
| <p>Low-clearance drive AD2 redirects drill power for tight interior access.</p> | <p>300P selection Choose 300P when included Angle Driver 2.0 matters.</p> |

FIELD USE NOTES

- **Match parts by edition;** black components can have edition-specific replacements.
- **Use controlled drill speed;** start slow and keep the cut smooth.
- **Manage line angle;** reposition the tool to avoid aggressive pulls and line breakage.
- **Use the dash protector;** protect interior surfaces throughout the removal.
